

EOI MAILER AND DASHBOARD

ABOUT THE CLIENT

A Profit for Purpose event organization that seeks to activate the circular economy within the community by getting people to donate their unused or unwanted household goods and to be resold to create purposeful profit.

Events aim to provide community members with alternate ways to source and purchase high-quality products (such as clothing, antiques, furniture & whitegoods) at prices that are affordable.

THE CLIENTS PROBLEMS

- Currently no tech stack - other than a static website and social media channels
- Problem needed to be achievable in the time frame and within our skill capability
- Pro's for us - no need to worry about integration into existing system
- Many tech challenges
 - No digital sorting of collected items
 - Move to a cashless payment method for events
 - No formal channel for expressing interest in hosting an event

PROJECT AIM AND SCOPE

Aim:

- To create a formal portal for organization wanting to host a WBGS- *with the ultimate goal of finding hosts that align with WBGS values*
- Retrieve information about candidates to be saved into a database- which could be used in other apps and send request to WBGS
- Secondary - Create a dashboard to track client info and application status

Scope:

- To provide WBGS with the tools to formally accept EOI's with these deliverables
 - Send those details via email
 - Save those details to a MONGO database
- To provide WBGS with a dashboard to manage EOI
 - Display EOI data
 - Shortlist candidates

APPROACH TO SOLVING PROBLEM

1. Separate Project into 2 sprints
2. Understand what the Client wanted to achieve
 - Model the events similar to TED x events
3. Understanding that the data collected in would have the potential to be used in other areas in the future i.e. CRM
4. UI/UX would be important
 - Landing page with an emotional hook then event details and achievements
 - EOI form would be designed to not overwhelm users

PLANNING

Sprint 1:

- Design a landing page
- Generate a dynamic user friendly form
- Save EOI details to the database
- E-mail the application to WBCS

Sprint 2:

- Create a Dashboard where EOI details could viewed
- Able to shortlist candidates
- Able to reject candidates
